SERVICE REQUISITION SYSTEM

VERSION 2.1

USER MANUAL

1.2

MODENAS

Motosikal Dan Enjin Nasional

Information System & Telecommunication Department, MODENAS

6 January 2025

Introduction

In the past, managers and end users faced challenges in accessing reports and tracking submitted tasks due to a less user-friendly system. Similarly, persons-in-charge (PIC) often struggled to keep up with incoming tasks, leading to delays in completing assignments.

To address these issues, version 2.1 of the Service Requisition system introduces significant updates:

- A **General Dashboard** that transforms old-school table-based reporting into a modern visual format.
- A **Personal Dashboard** to help end users track their submitted requests and enable PICs to manage their incoming tasks efficiently.

These updates aim to improve usability, enhance task tracking, and give the system a modern look and feel. This manual provides a step-by-step guide to help you make the most of these new features.

Table of Contents

Introduction **1**

Table of Contents **2**

Accessing Personal Dashboard **3**

1. Log In 3
2. Personal Dashboard in My Request Tab 3
3. Personal Dashboard in Task Tab 5
4. Important 6

Accessing General Dashboard **7**

1. Navigation 7
2. Monthly Dashboard 8
3. Yearly Dashboard 11
4. Download Button 15

Accessing Personal Dashboard

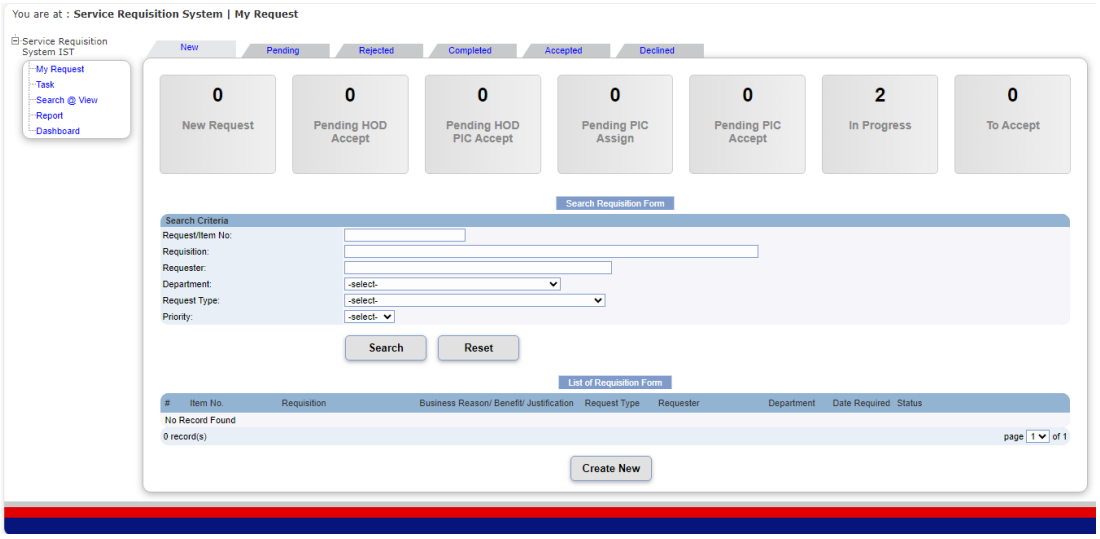
To access the new dashboard features, follow these steps:

1. **Log In**

    - Navigate to the login page of the Service Requisition system.
    - Enter your credentials and click **Log In**.

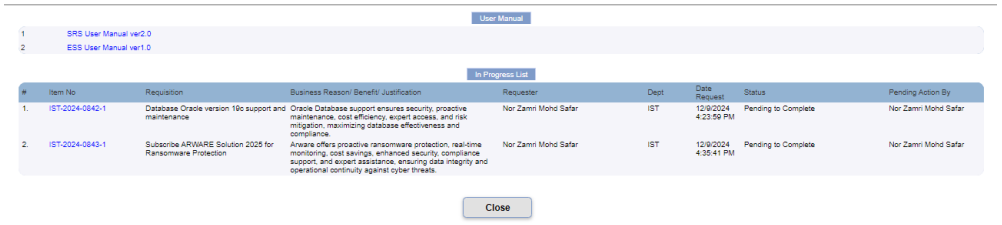
2. **Personal Dashboard in My Request Tab**

After a successful login, users are directed to the **My Request** tab within the Personal Dashboard. This tab is designed to help users efficiently manage their requests to other departments.



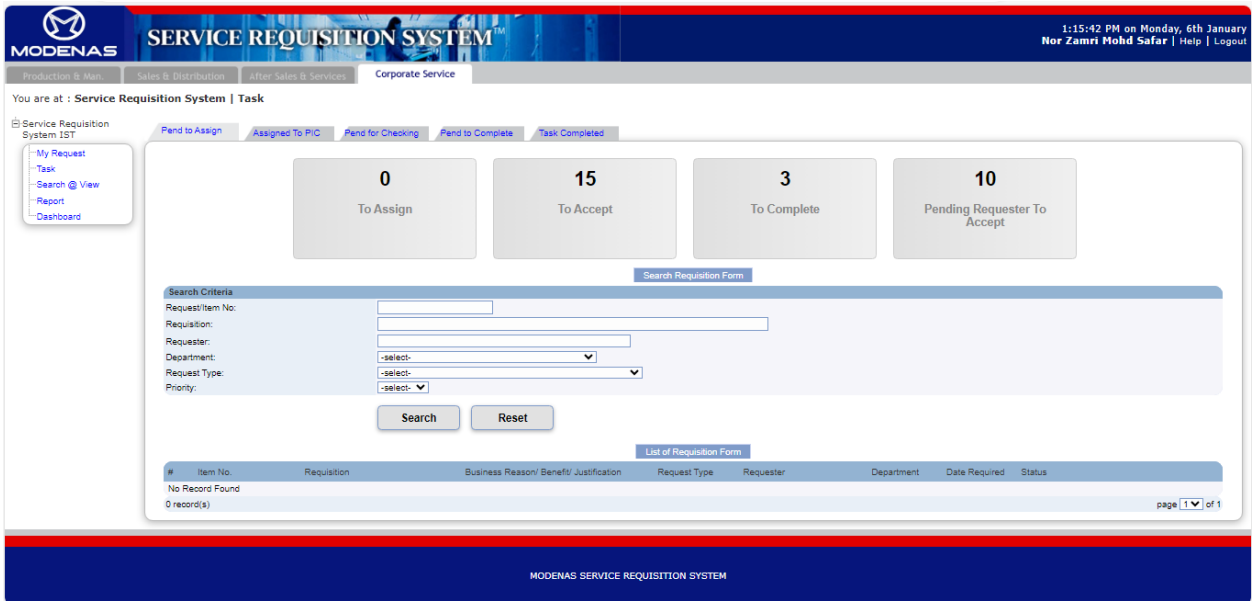
- Card View Layout
  - The new Personal Dashboard is displayed in a **card view** format, offering a visually organized and user-friendly experience.
  - Each card in the **My Request** tab is separated by **7 status categories**, with each card only showing the relevant requests for that specific status.

- Navigating Request Cards
  - Each status category has a corresponding card.
  - Click on any card to view all the requests that fall under that specific status.
  - The requests will be displayed within the card, allowing for easy tracking and management.



3. Personal Dashboard In Task Tab

The **Task Tab** within the Personal Dashboard provides a streamlined way for persons-in-charge (PICs) to manage their incoming tasks. While the layout and design are similar to the **My Request** tab, the **Task Tab** is specifically designed to help PICs track and prioritize tasks assigned to them, rather than submitting requests to other departments.



- Navigating to the Task Tab
  - To access the Task Tab, follow these steps:
  - Click on the Task Tab in the left-side menu.
  - You will be directed to the Task Dashboard, where you can view all incoming tasks.

- Task Dashboard Layout
  - Similar to the **My Request** tab, the **Task Tab** is displayed in a **card view** layout. However, instead of 7 statuses, the **Task Tab** only includes 4 statuses.
  - Each card in the **Task Tab** displays tasks related to its specific status.

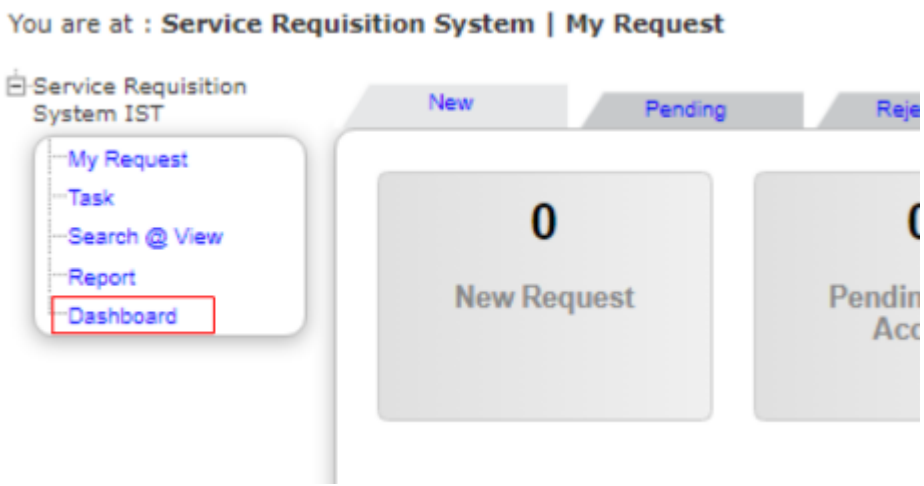
4. Important

- Although the **My Request Tab** and **Task Tab** have similar layouts, it's important to note that the **My Request Tab** is for users to submit requests to other departments, while the **Task Tab** is for PICs to manage their incoming tasks.
- These two tabs are designed to be distinct, so users should not confuse the functions between them.
- Items in the **Personal Dashboard** are only meant for quick viewing and tracking of requests. Requests will remain in the dashboard until they are completed and accepted by the requester.
- Requests will be displayed in the **Personal Dashboard** for a maximum of 2 years. For example, if a request is made on 6/1/2025 and is completed by the PIC but not accepted by the requester, it will stay in the dashboard until 6/1/2027. After 2 years, the request will no longer be displayed in the **Personal Dashboard** and can only be accessed in the old **Pending** tab.

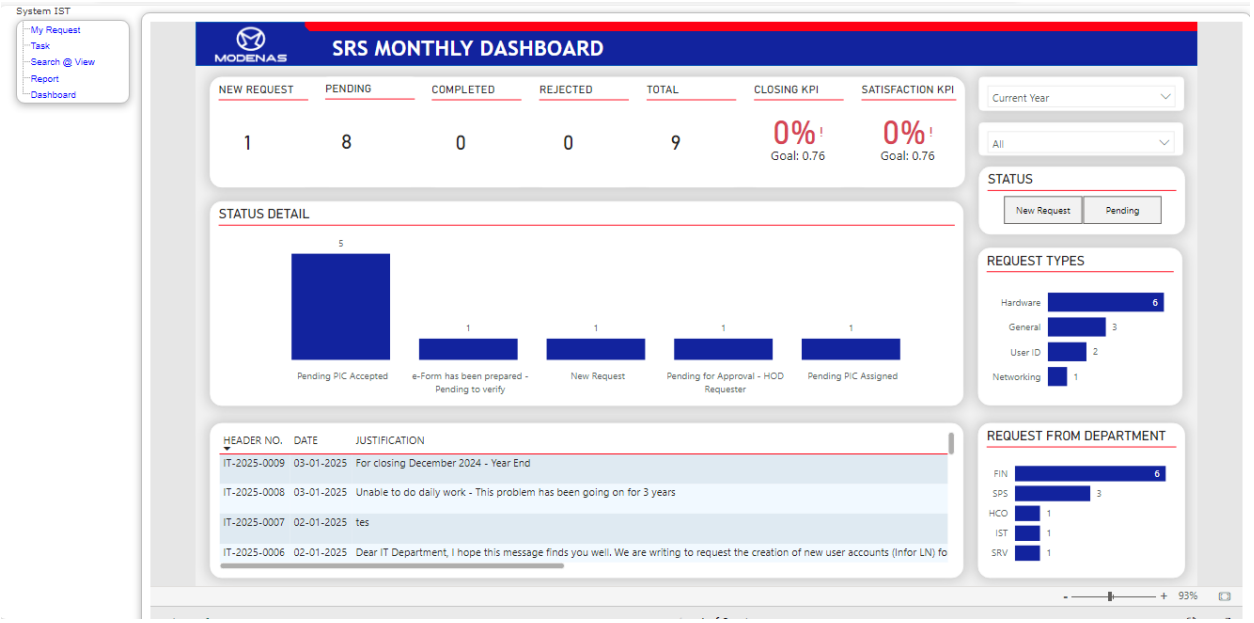
Accessing General Dashboard

1. Navigation

- To access the **General Dashboard**:
- In the left-side menu, click on the **Dashboard** tab.



- You will be directed to the **General Dashboard**, where you can view all available data and features.

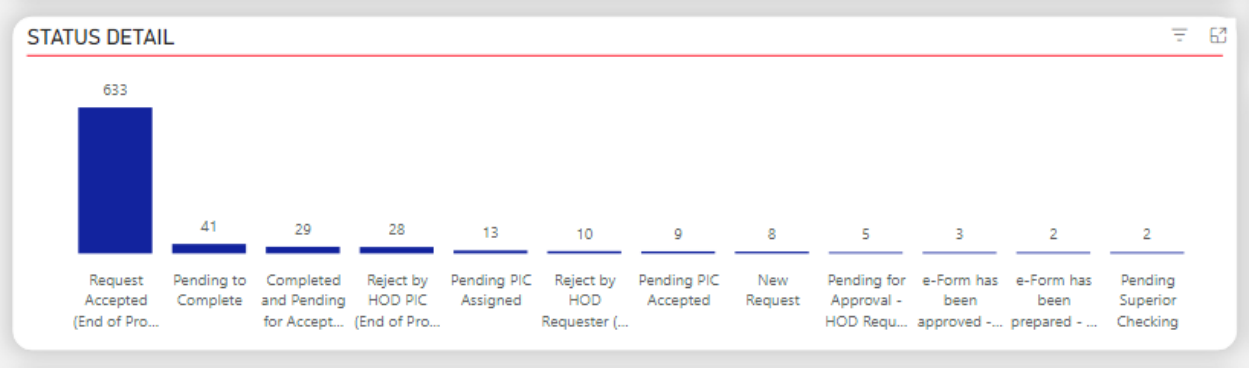


2. Monthly Dashboard

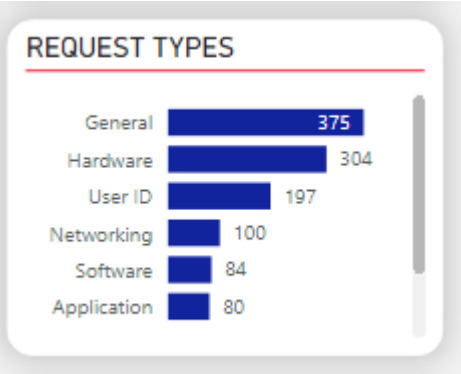
Upon accessing the **General Dashboard**, users are first presented with the **Monthly Dashboard**. This dashboard displays data for the current month by default but also offers the option to view yearly data. The monthly view is more detailed and zoomed in, providing specific insights for users.

- Visual Overview
  - Scorecard
    - The first visual element you will see is the **Scorecard**.
    - This scorecard displays the count of items for a specific month.
    - Note: The scorecard is not interactive, and it simply provides a quick count overview for the selected month.

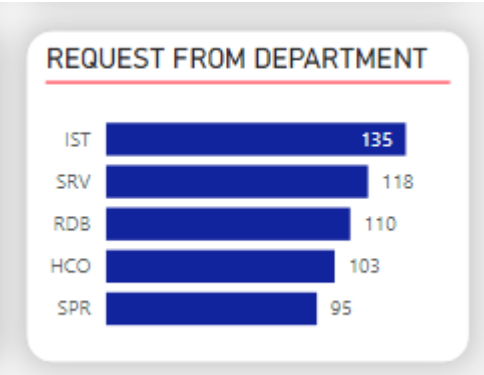
  - Status Details (Column Chart)
    - Below the scorecard, you will see a **Column Chart** that shows the status details of various items.
    - The column chart is interactive, allowing you to click on any column to filter the data based on the status selected.



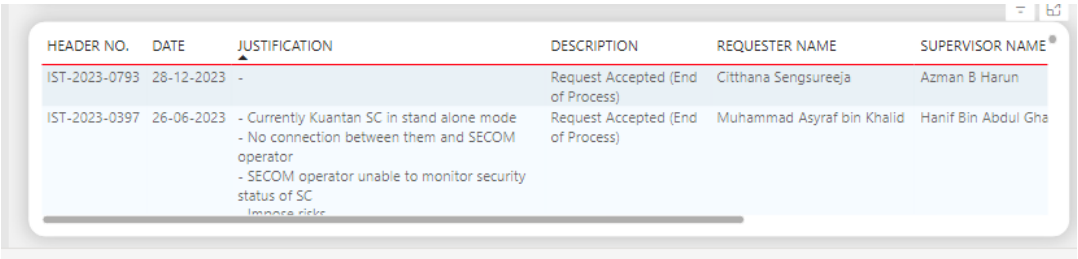
- Horizontal Bar Charts (Request Type Bar Chart)
  - This chart displays the top 5 most requested types of requests, sorted by count.
  - You can interact with the bars by clicking on them to filter the data and view detailed information in the table beside the chart.



- Horizontal Bar Charts (Request from Department Bar Chart)
  - This chart displays the top 5 most request departments based on request volume.
  - Just like the Request Type Bar Chart, you can click on any bar to interact and filter data that will be reflected in the table beside it.



- Table Visual
  - The **Table Visual** displays data related to the interaction you've made with the dashboard.
  - Once you click on any chart or filter, this table will show relevant data based on that selection, allowing for further analysis and tracking.

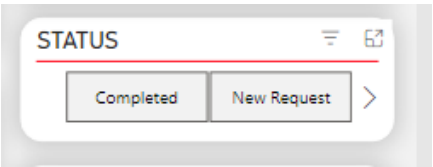


HEADER NO.	DATE	JUSTIFICATION	DESCRIPTION	REQUESTER NAME	SUPERVISOR NAME
IST-2023-0793	28-12-2023	-	Request Accepted (End of Process)	Citthana Sengsureeja	Azman B Harun
IST-2023-0397	26-06-2023	- Currently Kuantan SC in stand alone mode - No connection between them and SECOM operator - SECOM operator unable to monitor security status of SC - Impose risks	Request Accepted (End of Process)	Muhammad Asyraf bin Khalid	Hanif Bin Abdul Gha

- Dashboard Filter
  - Date Filter
    - You can filter the data by selecting a specific **Month** and **Year** from the dropdown list.
    - This allows you to focus on data for a particular time period, whether it's a specific month or a broader yearly overview.

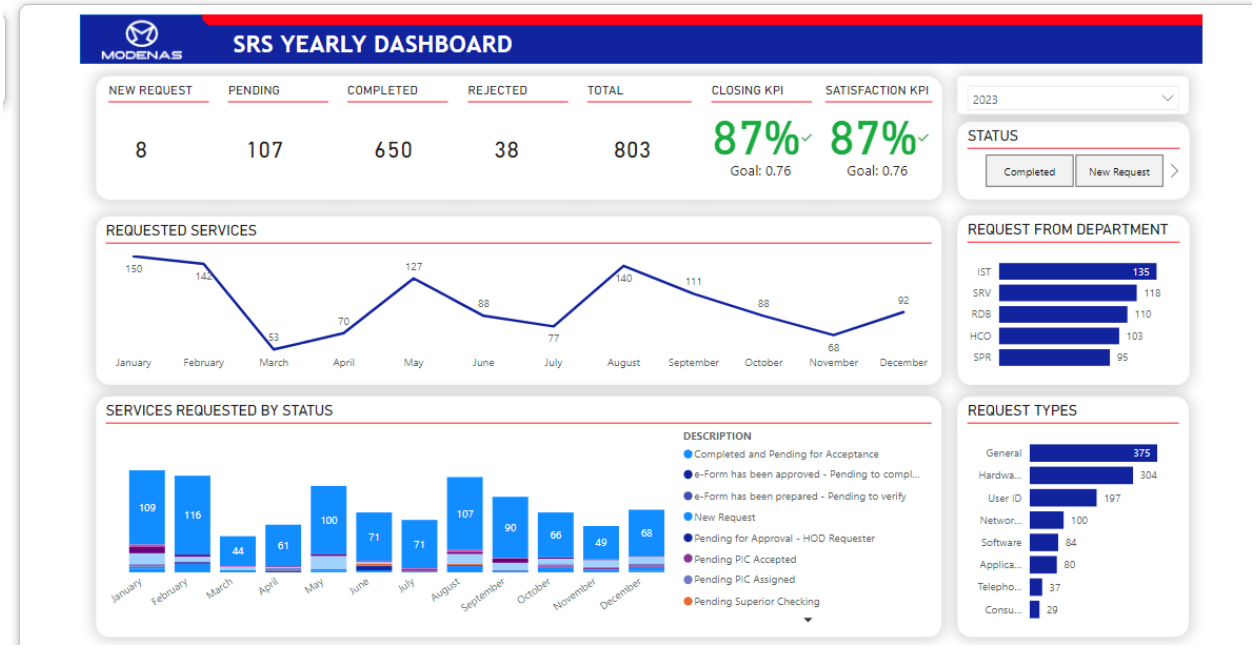
  - Filter by User (Your Own Data)
    - If you want to see only your own data, you can use the **Filter by Name** option.
    - Select your name from the dropdown list to filter and view data relevant only to your requests or tasks.

  - Status Filter
    - The **Status Filter** allows you to view data based on the status of requests or tasks.
    - Unlike the interactive Status Bar Chart, this filter provides four distinct status options:
      - New Request
      - Pending
      - Complete
      - Reject
    - After selecting a status, the dashboard will display data specific to that status.
    - Users can navigate to other status by clicking the arrows.

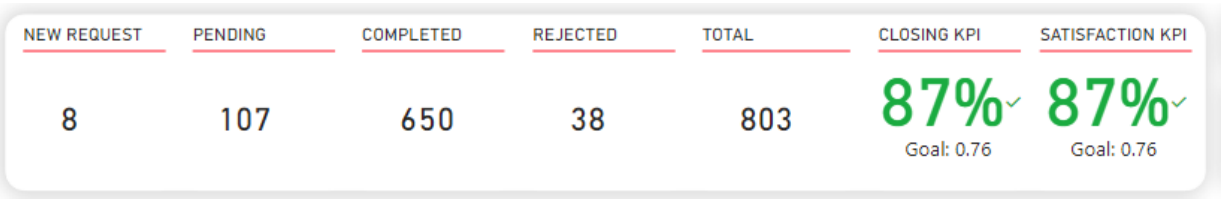


3. Yearly Dashboard

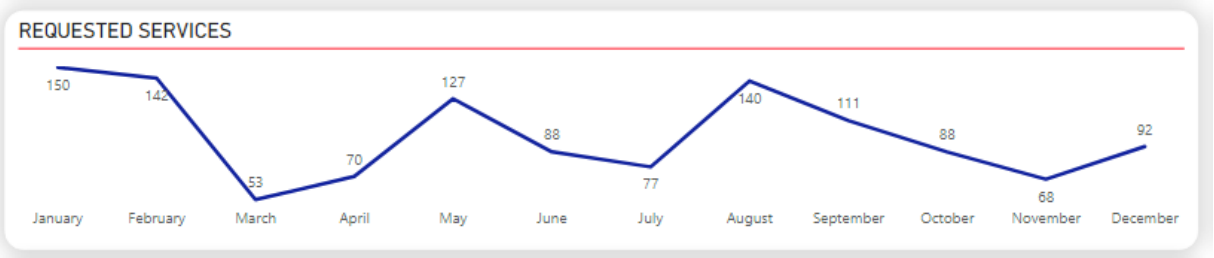
The **Yearly Dashboard** provides a broad overview of data for an entire year. Unlike the **Monthly Dashboard**, which zooms in on detailed monthly data, the **Yearly Dashboard** displays summarized data for the selected year.



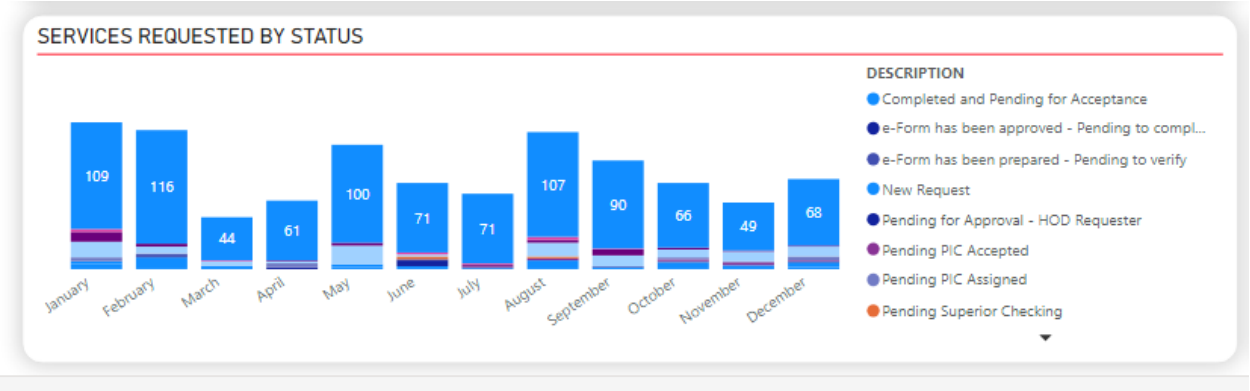
- Visual Overview
  - Scorecard
    - The **Scorecard** on the **Yearly Dashboard** is exactly the same as in the **Monthly Dashboard**.
    - It shows the count of items for the entire year, providing a quick, non-interactive overview of the data.
    - Like the monthly version, the scorecard does not allow for interaction; it serves as a visual summary of the year's counts.



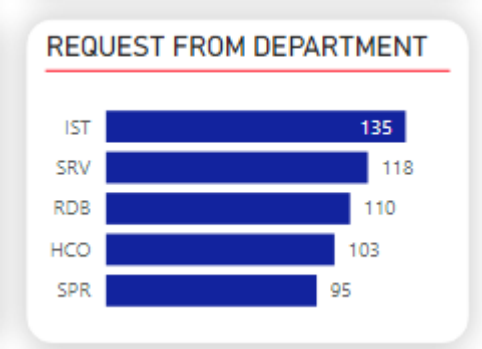
- Line Chart
  - The **Line Chart** on the **Yearly Dashboard** displays the **count of received requests** for each month of the year.
  - This chart allows users to visualize the **trend** of their received items over time, making it easy to identify peaks, troughs, and any patterns in request volume across the months.



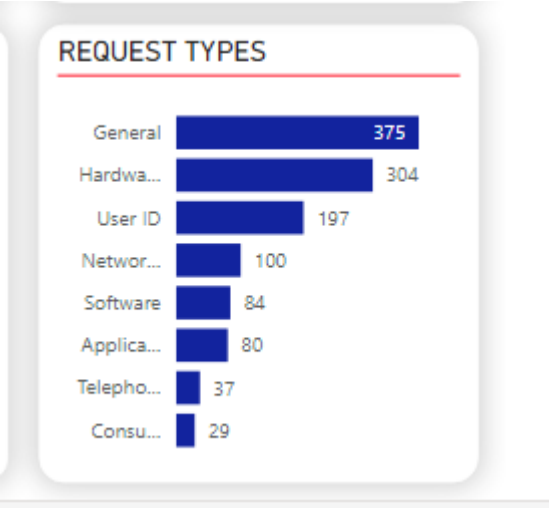
- Column Chart
  - The **Column Chart** shows the mix of all statuses for each month in a single chart.
  - Each column represents a month, and within the column, the distribution of statuses displayed.
  - This chart allows users to get an overall sense of the status distribution for the entire year in a quick, visual format.



- Horizontal Bar Chart (Request from Department)
  - This chart displays the top 5 most requested departments for the entire year, sorted by request count.
  - The functionality is the same as the **Monthly Dashboard's Request from Department Bar Chart**, but it covers the full year.

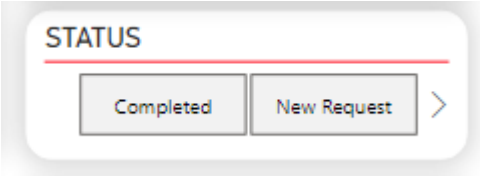


- Horizontal Bar Chart (Request Types)
  - This chart shows the top 5 most requested request types for the entire year.
  - Like the **Monthly Dashboard's Request Type Bar Chart**, this one displays the count of each request type for the entire year, showing only the top 5 types.

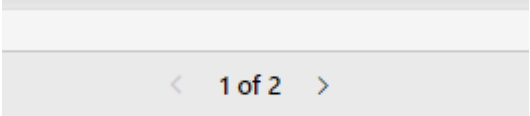


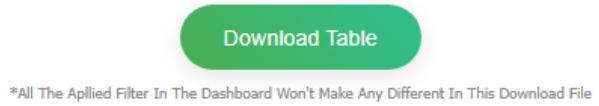
- Dashboard Filter
  - Year Filter
    - Users can filter the data by **Year** using the dropdown menu.
    - This filter allows you to view the dashboard data for any specific year.

  - Status Filter
    - The Status Filter allows you to filter the data based on the status of requests or tasks.
    - The available statuses are:
      - New Request
      - Pending
      - Complete
      - Reject



- Navigating to the Yearly Dashboard
  - Scroll to the bottom of the **Monthly Dashboard**.
  - Click the **arrow** at the bottom of the dashboard to switch to the **Yearly Dashboard**.



4. Download Table


- The **General Dashboard** provides users with the option to download the displayed data for further analysis. However, it's important to note that the downloaded data is **independent** of any filters applied on the dashboard. This means that whatever filters you've applied to customize the view on the dashboard will not affect the data in the downloaded file.
